

Automatic Slab Lifter

Aardwolf offers a new version of its patented Aardwolf Slab Lifters. The new Aardwolf Slab Lifter Automatic 50A has an integrated auto-lock, unlock mechanism (patent pending), which allows the clamp to automatically grip slabs on pick-up and release the slabs on set down. In many situations this makes moving and handling of slabs safer and more convenient.

Features

- **Size:** Being of a compact construction, the Aardwolf Slab Lifter Automatic 50A allows for close packed stone slabs to be lifted out of racks and containers. Lower height slabs placed along side of taller slabs offer no problem, as is the case with scissor clamps.
- **Versatile:** Ideal for construction work. Because the clamping mechanism is to the front of the slab, they allow panels to be placed close against walls.
- **Safety:** Requires only a small movement of the slab to engage and grip the slab, which is generally well below the over balance angle thus eliminating the danger to the operator.
- **Secure:** The Aardwolf clamps grip marble and granite slabs firmly. The Aardwolf Slab Lifter Automatic 50A has a force-multiplying factor of approximately 2.5 to 1.

Details

	Metric (mm-kg)
Grip range	10 - 50
Working load limit	1200
Net weight	18.7
Gross weight	19.4
Packaging dimension	380x200x230
